B.Sc. in Computer Science & Engineering | Sylhet Engineering College | Graduated: 2026

CGPA: 3.75/4.00 (with distinction)

PROFESSIONAL SUMMARY

Full-stack developer with hands-on experience building and maintaining a real college admission system. I handle the full process from planning and UI design in Figma to development, third-party integrations, deployment, and ongoing support. Strongest with Next.js, React, MySQL, Linux, Docker, and VPS infrastructure. Also built a blockchain certificate system and a real-time social platform.

TECHNICAL SKILLS

Frontend & UI: Next.js (App Router), React, TypeScript, JavaScript, Tailwind CSS, shadcn/ui, HTML5, CSS3, Figma, responsive UI

Backend: Next.js Server Actions/API Routes, Node.js, REST APIs, Web-Sockets, authentication, authorization, RBAC

Databases: MySQL, PostgreSQL, MongoDB, Prisma ORM, Firebase, Convex, schema design, query optimization

DevOps: Linux, Ubuntu Server, CachyOS, SSH, Docker, Docker Compose, PM2, Traefik, GitHub Actions, VPS management

Cloud & Web: DigitalOcean, Hostinger KVM, Vercel, Cloudflare DNS/SSL/Turnstile, domains and subdomains

Integrations: SSLCommerz, AlphaNet SMS, email/SMS OTP, Google Authentication, web scraping, blockchain verification, face recognition

FEATURED PROJECTS & ENGINEERING EXPERIENCE

Paid Project (Solo): SEC Central Admission Management Website

Lead Full-Stack Engineer & System Administrator | Sylhet Engineering College | 2024–Present | [Live](#) | [Case Study](#)

Built and maintain the college's central admission system as a solo developer. I planned the system, designed the UI in Figma, made the main technical decisions, built the application, connected the outside services, and manage the server.

- Built the full student application flow with phone and email OTP, account recovery, application tracking, payment receipts and SSC/HSC checks.
- Added a result-checking system that can collect student results from the government education results website when the college database does not have the data. It reads the result, checks the required GPA and eligibility rules, and lets eligible students continue.
- Integrated SSLCommerz for payments, AlphaNet for SMS, email OTP, and Cloudflare Turnstile for bot protection.
- Built the admin side for applications, student records, seat planning, roll assignment, application/exam settings, attendance, results, and room-wise exam data.
- Created export tools for result processing, attendance, student records, and exam management.
- Deployed and maintain the system on VPS infrastructure using Docker, Traefik, Cloudflare, SSH, DNS, and regular server maintenance.

Hobby Project (Solo): Hive — Real-Time Social Media Platform Like Facebook

Frontend Developer | Personal / Learning Project | React & Firebase | [Live](#)

A Facebook-style social app built while learning React. Includes authentication, friend requests, posts with likes/comments/shares, real-time chat, and small games that can be played with friends.

Academic Project (Team): CertiChain — Blockchain Certificate Generation & Verification

Full-Stack Developer | Final Academic Project | 2026 | [Live](#)

Certificate generation and verification platform for the college, with role-based access, face-recognition checks during verification, and certificate hashes stored on the blockchain so issued certificates can be checked later.

More projects and case studies on my [portfolio](#).

ENGINEERING PROFILE

PRODUCT OWNERSHIP

Plan, design, build, deploy, and support a complete product from the first idea to live use.

PRODUCTION EXPERIENCE

Two years maintaining a live institutional system and handling new requirements, fixes, and support.

INFRASTRUCTURE

Comfortable with Linux, Docker, Traefik, Cloudflare, SSH, DNS, and running multiple apps on a VPS.
